

Jon Mooring

Web Developer

Email: jonmooring@gmail.com

Phone: 704-608-1510

Technical Skills

- Experience developing user-focused, responsive user interfaces utilizing standard development tools, including but not limited to HTML (5), CSS (3), and JavaScript. Very familiar with technologies such as jQuery and Backbone.
- Experience developing scalable solutions for high-traffic websites. Developed and optimized user interface for site receiving over six million page views per month.
- Experience developing mobile applications utilizing standard development tools, including but not limited to jQuery Mobile, PhoneGap, and Sencha Touch. Emphasis put on responsive designs rather than standalone mobile sites, when appropriate.
- Experience developing backend solutions, primarily in Python and PHP, utilizing whichever tools are deemed most appropriate for the job. Very familiar with technologies such as Django and WordPress. Limited experience with CodeIgniter, Symfony, and other MVC frameworks.
- Experience building RESTful web services to serve data through an API from a variety of different backend solutions, including MySQL, PostgreSQL, and MongoDB
- Experience configuring and working with Mac OS X and Linux development environments
- Experience maintaining open-source development projects
- Experience with version control systems, specifically Mercurial
- Experience with agile development methodologies, specifically Scrum

Work Experience

Central Piedmont Community College, Charlotte, NC

Web Developer

October 2008 – Present

- Primary focus is on user interface development, tasked with designing functional, user-focused interfaces for the College's wide range of web applications.
- Secondary focus is backend development, which includes maintaining the College's application framework, based on a Python framework known as Django.
- Assisted in the development and maintenance of the College's content management platform, which receives over six million page views each month
- Assisted in the development of several internal mobile applications for use on a wide range of mobile devices, including iPhones, Android devices, and Blackberries.
- Helped develop and maintain two open-source projects while with the College.

Boodel Consulting, Spokane, WA

Web Developer

October 2008 – Present

- Primary focus is on maintenance of existing PHP-based systems for an extensive client list, including Summerlin Homes (Las Vegas), Pearson Packaging Systems (Spokane), Make-Parts (Las Vegas).
- Secondary focus on Linux web server administration via remote shell
- Built several custom solutions, typically utilizing either the CakePHP framework or WordPress with a MySQL backend. Custom solutions typically included design and development of both the frontend user interface as well as the backend solution.

Folsom Tech Consulting, Las Vegas, NV

Web Developer

July 2006 – November 2009

- Primary focus was on custom PHP web application development utilizing the CakePHP framework on a MySQL backend for an extensive client list, including Buserini Group (Las Vegas) and Kooky Klickers (Las Vegas).
- Custom application development included designing and developing frontend user interfaces as well as developing data models and business logic on the backend.
- Assisted in maintaining several existing PHP-based solutions for various clients, primarily in the real estate business.
